

Exercise 1

- a) Integrate the PoiViewModel in PoiMapFragment.
- b) Integrate the PoiViewModel in PoiReviewsFrangment (from Android Basics Homework). Add additional LiveData objects, functions in PoiViewModel, PoiRepository if needed.

Exercise 2

Load the POI list every 5 seconds to get the latest data. Use suspending functions/coroutines.

Exercise 3

Using suspending functions/coroutines/flows model the following:

An online book shop sells several types of books: Adventure, Mystery, Fantasy, Historical, etc. Every 10 minutes the shop receives orders that contain from 1 to 5 books of different types. Each type of book is stored in a different warehouse, so it takes from 1 to 6 minutes to get a book. After collecting all the books from an order they need to be packed, which takes 4 minutes.

There are several employees that work on preparing an order.
